

Basics of Supply Chain Management (BSCM)

The APICS **Basics of Supply Chain Management (BSCM)** is the entry module for the Certification in Production and Inventory Management (CPIM). This will be the final opportunity to take the current version of the BSCM module before the longer and more expensive BSCM module is introduced in October 2017.

Taking the current BSCM module exam before January 7, 2018, will allow participants to automatically transfer the credit to the new two module CPIM structure that will be launched October 1st.

BSCM covers basic concepts in managing the complete flow of materials in a supply chain from suppliers to customers and manufacturing, distribution, service, and retail industries. It includes the fundamental relationships in the design, planning, execution, monitoring, and control stages of operations.

Topics include:

- understanding basic business wide concepts, including various supply chain environments and issues as inventory costs, functions, and metrics
- managing demand, including markets and customer expectations
- designing products, processes, and information systems

Who should attend?

Planners/Scheduler, Buyer, Inventory Manager, Operations Manager, Purchasing Manager, Warehouse Manager, Manufacturing Supervisor, Supply Chain Manager.
